SIMAJEN
ENVIRONMENTAL ADVISORY
ENVIRONMENT • HEALTH • COMPLIANCE
Practical advice for a healthier, more resilient tomorrow.

CAPABILITY STATEMENT

Environment • Health • Compliance

Practical advice. Experienced delivery. Stronger compliance.

Who We Are

Simajen Environmental Advisory is a Western Australian consultancy providing Environmental Health, environmental management and regulatory compliance services to local government, government and industry.

We provide flexible access to experienced capability — from hands-on inspections and investigations through to environmental audits, policy and systems improvement, project delivery, senior technical support and coordination-level assignments.

We understand both sides of the equation: the regulator's expectations and the operator's realities.

Where Environmental Health Meets Environmental Management

Simajen's point of difference is experience across both local-government Environmental Health and large-scale mining environmental management. This allows us to connect community / public-health impacts with environmental sources, operational controls and compliance systems.

Environmental Health	Environmental Management	Integrated value
Noise, odour, nuisance & amenity	Operational sources, emissions & controls	Evidence-based investigation and practical mitigation.
Water quality & sampling	Environmental monitoring	Risk-based monitoring, escalation and corrective action.
Waste, public-health hazards & complaints	Waste, spills & contaminated soil	Protect people and environment through workable controls.
Inspections & regulatory compliance	Audits, assurance & obligation management	Defensible findings, actions and follow-up.
Complaint investigation	Environmental incident review	Root cause, corrective action and prevention.
Policies & procedures	Environmental management controls	Translate regulation and risk into consistent practice.

Core Services

Capability	Examples
Local Government Environmental Health	EHO / Senior EHO support; inspections; complaints; regulatory assessment; approvals; case management; backlog reduction; technical reporting; senior technical / coordination support.
Inspection & Compliance Projects	Food and public-health inspection programs; overdue / reinspection campaigns; targeted compliance projects; complaint or assessment backlogs; project-based delivery.
Environmental Health Investigations	Noise; nuisance; odour; smoke; waste; vermin; mould / housing-related health concerns; vectors; monitoring; evidence review and recommendations.
Food Safety & Public Health	Food premises inspections; fit-out / pre-opening reviews; complaints; sampling support; public-health risk; corrective action and compliance advice.
Environmental Management & Compliance	Audits; environmental risk; obligation reviews; procedures and controls; incident reviews; waste / contamination; monitoring frameworks; corrective action and assurance.
Governance, Systems & Leadership	Policies; SOPs; process improvement; service reviews; compliance registers; project delivery; workforce planning; business readiness; mentoring and training.

Principal Experience

The Principal Consultant brings more than 20 years of experience across Environmental Health, environmental management, compliance, risk, projects, operational improvement, workforce planning, business growth and stakeholder engagement.

- Local government Environmental Health experience in Western Australia and internationally.
- Approximately two years as an Environmental Specialist within a major mining company, undertaking environmental compliance monitoring, audits, risk reviews, regulator engagement, incident support and operational environmental advice.
- Environmental control implementation, including an approved hydrocarbon-contaminated soil containment / treatment initiative.
- Technical procedures, SOPs, work instructions, process standardisation and continuous improvement.
- Project management, business readiness, risk and change management across major mining operations.
- Executive business cases, cross-functional leadership, workforce and capability planning.

Qualifications

Qualification	Provider / focus
MSc Environmental Management	University of Derby, UK
BSc Environmental Health Science	Solusi University
Diploma of Applied Project Management	Australian Institute of Management
Lean Six Sigma Green Belt	Continuous improvement / operational excellence
Certificate IV Training & Assessment	Training and capability development
Integrated Environmental Management CPD	University of Bath
Contract Planning, Procurement, Law & Risk CPD	Australian Institute of Management

Why Simajen

- Practitioner-led, not recruiter-led.
- Environmental Health and environmental management capability in one practice.
- Hands-on delivery through to senior technical and project support.
- Practical, proportionate and risk-based advice.

- Flexible engagement: embedded support, fixed projects, inspection programs, advisory or retainers.
- Strong documentation, governance, process improvement and stakeholder capability.
- Specialist partners can be engaged where disciplines such as acoustics, engineering, laboratory science or occupational hygiene are required.

Engagement Options

Model	Suitable for
Embedded support	Temporary EHO / Senior EHO, project lead or senior technical / coordination support.
Fixed-scope project	Defined deliverables, milestones, timeframe and fee.
Inspection program	Agreed inspection volumes and reporting outcomes.
Advisory services	Hourly / daily technical, regulatory or environmental advice.
Retained support	Ongoing access to senior expertise without permanent headcount.
